Hiring Manager
FurtherAI
San Francisco, CA

Dear Hiring Manager,

I am writing to express my strong interest in the Frontend Engineer - Web position at FurtherAI. With 8+ years of experience building scalable web applications using React and TypeScript, I am excited about the opportunity to help build AI-powered tools that make insurance professionals more effective.

Your mission to augment human expertise with AI resonates deeply with my experience building enterprise SaaS products. At PropertyScout, I contributed to a 27% increase in user traffic through web application improvements. At AccelByte, I built tools for AAA game developers and reduced compilation time by 40% while establishing Storybook documentation for our component library. At 99.co, I improved Core Web Vitals, reducing LCP from 4.5s to 1.2s.

My technical background aligns closely with FurtherAI's stack. I have extensive experience with React, TypeScript, Next.js, Tailwind CSS, and GraphQL. I've collaborated with designers to translate Figma specs into production-ready features and contributed to design systems using Storybook. I thrive in cross-functional environments, working closely with design, product, and backend teams to ship features that balance usability, performance, and clean code.

I am particularly drawn to FurtherAI because of the opportunity to work on AI-powered workflows in a regulated industry. The challenge of turning complex insurance processes into simple, reliable interfaces excites me. I believe my experience building data-intensive SaaS products combined with my focus on performance and accessibility would enable me to contribute meaningfully to your product.

I would welcome the opportunity to discuss how my background can help FurtherAI build the future of insurance operations.

Best regards,

Kenni Gandira Alamsyah
